AUTOMOTIVE TURBOCHARGER GUIDE

YOUR SERVICE REPLACEMENT GUIDE
FOR OEM QUALITY TURBOS

Featuring:

- Passenger Cars - Light Truck
- Both Gasoline and Diesel
- Upgrades Where Applicable

The Official Automotive Turbo Guide©

Please Read Carefully

The official ATG© is the automotive service industry's most complete and comprehensive service guide for turbochargers in North America.

Turbochargers are rapidly becoming commonplace on both gasoline and diesel-powered cars and light trucks. Turbochargers live in an extreme environment, unlike any other engine component. While today's OEM turbochargers are highly dependable, off-brand rebuilt units and off-shore will-fits frequently bypass quality standards that can shorten their in-service life. The ATG is dedicated to ensuring high-quality replacement assemblies from the world's most reputable OEM turbo manufacturers. This guide is your key to offering the exact, high-quality, original equipment replacement turbocharger, thereby ensuring your reputation for quality service.

The ATG incorporates service replacements from the world's five major OEM manufacturers including, **Garrett®**, **Holset®**, **BorgWarner®**, **IHI®**, and **Mitsubishi®**. Use of the ATG is your and your customers' assurance of getting the highest quality product.

How to Use the ATG

It is important to understand that using the vehicle application guide to select the correct OEM replacement turbo is only accurate approximately 80% of the time. OEM turbochargers constantly evolve for improvements in both durability and performance and can change in mid-year production. The best way to ensure you have the most accurate and up-to-date replacement turbo is to use the part number cross-reference. Identify the turbo part number of the unit you are replacing (see Nameplate Guide on Page 1) and use the correct ATG application section and cross-reference to verify the proper replacement turbocharger. If your current supplier does not use the correct OEM replacement number you have no way of knowing if you are using the most up-to-date replacement unit. Automotive turbos are frequently not available as remanufactured due to the extreme temperatures and high rotational speeds seen in operation. However, in a few applications, remanufactured turbochargers are safely available. If your application has a reliable remanufactured unit available, it will be shown in the ATG.

Finding Upgrades

Another high-value feature of the ATG is the reference to upgrades shown directly in the application section, where available. This allows you to instantly know if there is an upgrade option. Turbocharger upgrades include performance upgrades where advanced units supply even more air and where significantly improved designs provide longer service life when a vehicle is used in an extreme or "severe-duty" application. One example of this is shown on page 13. The 2005-2014 Sprinter van has a severe-duty option for vehicles in delivery routes where many stops are made daily. The severe-duty option offers three times the service life over the original like-for-like unit!

Popularity Codes

The ATG gives larger service providers insight into stocking the turbos of highest demand for service replacement. Each turbocharger is coded with a popularity code of "A" through "D". The "A" items account for those turbos that amount to 50% of all turbos replaced. The "A" + "B" items account for 80% of all turbos replaced. The "C" items add another 15%, while the "D" items are the bottom 5% in popularity.

Installation Tip

New replacement turbochargers are built dry for quality control to double-check the "rotor tilt." Before reconnecting the oil line on a turbocharger, be sure to pour a small amount of clean, fresh oil into the inlet while simultaneously spinning the compressor wheel by hand, and PRIOR TO STARTING THE ENGINE! You will feel the oil clearances tighten up to a normal level.

TO AVOID INJURY, NEVER PLACE HANDS OR FINGERS NEAR A TURBOCHARGER DURING OR SOON AFTER ENGINE OPERATION!

WARNING: Cancer and/or Reproductive Harm - www.P65Warnings.ca.gov

These products can expose you to chemicals that include toluene and/or benzene, which are known by the State of California to cause cancer, birth defects and/or other reproductive harm.

Please Note: Applications Are Provided As Reference Only. While every reasonable effort is made to ensure the accuracy of this data, we are not responsible for any errors or omissions contained on these pages. Please verify any information in question by contacting your nearest Diesel USA Group location or sales person.

TURBOCHARGER IDENTIFICATION

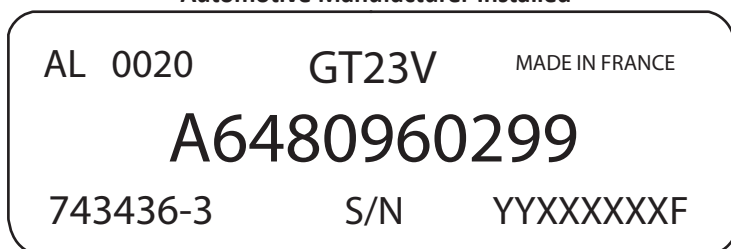

Information for Correct Turbocharger Replacement: Finding the Turbocharger Part Number

As previously outlined in the introduction, the turbocharger part number is the most accurate way to verify the correct replacement for the vehicle you are servicing. The part number you need is most often found on the turbocharger “Nameplate.” The turbocharger nameplate is an industry standard that is used by OEMs and Automotive Suppliers worldwide to identify the correct turbocharger used on a vehicle.

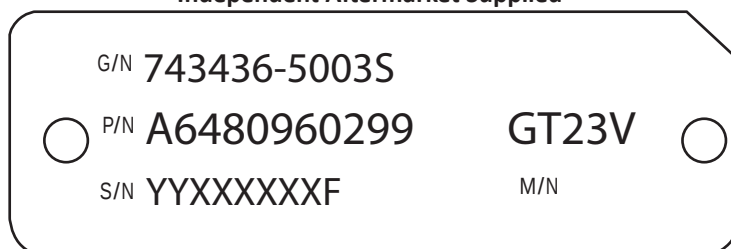

The nameplate design will vary according to whether it relates to an original equipment turbo that was installed by the vehicle manufacturer or a turbo bought through the independent aftermarket. Regardless of its origin, most nameplates show a Customer or OEM turbocharger part number, turbo model, and serial number.

Example of the same “Garrett” turbocharger with nameplate variations:

Automotive Manufacturer Installed

Independent Aftermarket Supplied

Keep In Mind:

- Nameplate locations may vary. However, they are most often found on the compressor housing or bearing housing of the turbocharger.
- Nameplate designs may vary according to manufacturer, geographic region, assembly plants and/or local requirements.
- Details may be engraved directly onto the nameplate pad, or onto a separate nameplate, which is then bonded on top of the original factory nameplate.
- Some aftermarket nameplates may not include a logo or brand name of the manufacturer.
- **BorgWarner:** you may see BorgWarner, KKK, 3k, or Schwitzer on older turbos, and nameplates.
- **Garrett:** you may see Garrett, Garrett AiResearch, AlliedSignal, Garrett Engine Boosting Systems, or Honeywell logos on older turbos, and nameplates.
- **Holset:** you may see Cummins or Holset on turbos and nameplates.
- **IHI:** you may see IHI or Clover on older turbos and nameplates.

Popular Performance Upgrades:

Upgrade Number	Details	Features
739619-5004S	Garrett PowerMax™ GTP38R Ball Bearing Turbocharger for Ford 7.3L Powerstroke	- 88mm Comp. Wheel - Drop-In Replacement - 1.00 A/R Turbine Housing - Max Recommended Boost: 40 PSI
773540-5001S	Garrett PowerMax™ GT3794VA Turbocharger for GM 6.6L Duramax - Stage 1	- Direct Drop-in - Stage 1 Upgrade - Capable of up to 500 H.P.
773542-5001S	Garrett PowerMax™ GT4094VA Turbocharger for GM 6.6L Duramax - Stage 2	- Direct Drop-in - Stage 2 Upgrade - Capable of 575+ H.P.
881027-5001S	Garrett PowerMax™ turbocharger upgrade for the Ford 3.5L EcoBoost	- Direct Drop-in - Stage 1 Upgrade - Provides 22% More Flow - Supports Up To 300Hp* - Improvements In Efficiency - Improved Flow - Forged Fully-machined Compressor Wheel
881028-5001S	Garrett PowerMax™ turbocharger upgrade for the Ford 3.5L EcoBoost	- Direct Drop-in - Stage 1 Upgrade - Provides 22% More Flow - Supports Up To 300Hp* - Improvements In Efficiency - Improved Flow - Forged Fully-machined Compressor Wheel
881027-5002S	Garrett PowerMax™ turbocharger upgrade for the Ford 3.5L EcoBoost	- Direct Drop-in - Stage 1 Upgrade - Provides 22% More Flow - Supports Up To 300Hp* - Improvements In Efficiency - Improved Flow - Forged Fully-machined Compressor Wheel
881028-5002S	Garrett PowerMax™ turbocharger upgrade for the Ford 3.5L EcoBoost	- Direct Drop-in - Stage 1 Upgrade - Provides 22% More Flow - Supports Up To 300Hp* - Improvements In Efficiency - Improved Flow - Forged Fully-machined Compressor Wheel
886976-5004S	Garrett PowerMax™ turbocharger upgrade for the GM 6.6L LML Engine	- Direct Drop-in - Stage 1 Upgrade - Provides 19% More Flow - Supports Up To 600WHP - Improvements In Efficiency - Improved Flow - Forged Fully-machined Compressor Wheel
892179-5001S	Garrett PowerMax™ turbocharger upgrade for the GM 2.8L Engine	- Direct Drop-in - Stage 1 Upgrade - Provides 20% More Flow - Supports up to 160kW/ 215 BHP - Improvements In Efficiency - Improved Flow - Forged Fully-machined Compressor Wheel
886195-5001S	Garrett PowerMax™ turbocharger upgrade for the Ford 2013-2018 2.0L Ecoboost Engine - Stage 1	- Complete assembly with calibrated actuator - 350 flywheel horsepower (260kW) capability - GTX Gen II compressor wheel aero - +16% compressor flow compared to O.E. - Inco alloy turbine wheel material rated for up to 950° C - Stainless steel turbine housing rated for up to 950° C - 360-degree thrust bearing - Fully machined speed sensor port
